## Droid: Android Version Check Process

August 31, 2010 4:22 pm Jason

**Follow this process to check the Firmware Version of the Droid device.**

1. Turn on your phone and hit the MENU button to unlock it.
2. Press the **home** button.
3. Press the **MENU** button.
4. Go to **Settings** by either pressing the screen or using the navigation wheel.
5. Scroll down and select the **About phone** option. This should be the last choice in the list. Not only will this tell you which firmware version you're running, it will also let you know which build number you're running. In most cases when you read about a build number, they're only talking about the part that starts with RC, ie *RC33*. There's no point in checking for updates every day if there isn't a new update available.

If you're not running the latest version, press on **System updates**, and your phone will check to see if there is an update available for you.
